

## An Ideal Parental Control Solution for Android

*'Kids Place' App leads the way with useful parental controls that offer peace of mind*

The [Kids Place](#) app, from [Kiddoware](#), is designed with parents in mind. Made for use on both **phones and tablets**, Kids Place is the perfect solution for parents who have kids that love to play on touch screen devices.

Little fingers can easily hit the wrong buttons, accidentally order expensive apps, or click an ad that could potentially download bad apps, viruses, or software designed for identification theft. There is always the chance that the tablet or phone could get snarled beyond belief, with children hitting “back” or “home” buttons in a panic when they accidentally exit a game or application they’re using, or tapping randomly on a screen and unintentionally deleting important information.

Kids Place provides a solution, with its **parental control/child-lock** design. Its custom home screen, designed specifically for kids, allows children to play with apps that parents have already approved and preventing them from finding other ones. Kids Place has options to lock the home button, auto-restart apps (for little ones who accidentally exit out of a game) and block the marketplace, giving parents the peace of mind by **child-proofing** their device and relaxing while their children safely play on their tablet or phone.

With an option to disable or allow calls and text messaging, Kids Place even protects the phone bill from becoming too high and allows parents to decide whether or not they want their children using the phone. This app also protects personal information, such as phone numbers or photos, from accidentally being deleted while children are using the device.

Available for use on **Android** and perfect for use on the new **4.1 Jelly Bean version**, Kids Place is the perfect app solution for both parents and kids.
