

## A Free Android App to Protect Users Against Financial Losses from Property Theft and Damage

*App-Order.com's Free Android App, "Save Your Booty," Takes the Headache out of Filing an Insurance Claim*

Anyone who has ever had to file an insurance claim on lost or stolen property knows that it can be a frustrating process. Besides the headache of attempting to produce information like product descriptions, serial numbers, retail value, and current value, most people will never see the full worth of their lost or damaged property returned to them, as making their "best guess" to the insurance company rarely procures the return that they deserve.

**App-Order.com's free Android app "Save Your Booty" is an easy way for users to inventory all of the items in their homes or storage units, protecting them in the case of future damage or loss.** "Save Your Booty" organizes all of the information necessary to file an insurance claim at its users' fingertips: a picture, a description, the serial number, the retail value, and the current value.

"Save Your Booty" was inspired by the theft of a high-end bicycle. Its owner had none of the crucial information that was necessary to file a police claim. He mused to the owner of *App-Order.com* that it would be "nice if there were an app for that" and "Save Your Booty" was created and made available to all Android users for **no charge**.

This is a particularly notable tool for people who live in areas that are frequently struck by natural disasters, protecting them in the cases of earthquakes, tornadoes, hurricanes, fires, and floods at no cost to them. The versatile app has a wide variety of uses, including: cataloguing collections, keeping track of luggage to file a lost luggage report, and helping attorneys to manage estate planning.

## **App-Order.com**

*App-Order.com* lives up to their slogan, “We have an app for that!” They are the leader in efficiency and productivity apps. Their affordable and highly customizable apps reduce or eliminate data entry costs and improve and monitor quality control and staff efficiency, among other benefits.

They have developed apps for over 100 municipalities at no cost to the municipalities or their residents. The municipality apps facilitate communication between citizens and local government, helping them to identify graffiti and other problem areas, expediting the city’s ability to meet the needs of its citizens. Some of the apps that they have developed include: Mesa, Arizona; Santa Ana, California; and San Jose, California.
